

• A CONVERSATION, NOT A PRE-BUILT DIAGNOSIS

Make KYC work move with the deal.

A focused discussion of client intake, beneficial ownership and AML review
— with legal judgment kept firmly in your hands.

• YOUR CONTEXT

Transactions, funds, cross-border work.

VC & M&A

Across Legal advises entrepreneurs, investors and companies across financing, acquisitions and exits.

Financial regulation

Your practice supports fund managers with regulatory obligations and CNMV interactions.

Technology-aware

Your team advises on IP, privacy and technology — including the Maite.ai / Doctrine transaction.

From Across Legal’s published practice and transaction pages. We have not seen your internal KYC process.

• WHERE WORK MAY GET STUCK

What happens between “new matter” and “ready to proceed”?

Collect

Entity documents, ownership details and the purpose of the relationship.

Review

Risk-based checks, exceptions and missing information.

Approve

A documented decision with an accountable human reviewer.

Illustrative workflow to validate together; not a statement about Across Legal’s current process or obligations on every matter.

• MAP → BUILD → MEASURE → IMPROVE

Start with the work. Then build the agent.

01

Observe

Map the actual handoffs and repeated steps with your team.

02

Prioritise

Choose one narrow workflow and establish a baseline.

03

Build

Implement an assistant around your documents, rules and existing tools.

04

Improve

Measure the result; revise with the process owner’s approval.

• ILLUSTRATIVE, SUBJECT TO YOUR PROCESS

One corporate-client onboarding file.

INPUT Intake Organise received documents and identify what is missing.	CHECK Ownership Structure entity and beneficial-owner information for review.	REVIEW Exceptions Surface inconsistencies and assemble evidence, with sources.	OUTPUT Decision pack Prepare a reviewable file and follow-up list; a lawyer decides.
--	---	--	--

No autonomous risk decision, regulatory conclusion or reporting to authorities is implied.

• A BOUNDED CLIENT RESULT

We have done this in legal operations.

At a Dubai law firm, work spanning client onboarding, KYC, document checks and billing preparation contributed to an **80% reduction in manual hours** in that client engagement.

What it does not mean: the same result is not a forecast or guarantee for Across Legal. We would first measure your baseline and choose a feasible slice.

• FOUR DISCOVERY QUESTIONS

Help us identify the right first workflow.

-
- Which types of matters actually trigger AML/KYC duties?
-
- Who collects documents, assesses risk and approves a file?
-
- Where do requests, reviews and decisions live today?
-
- Which handoff delays the start of a matter most often?

• IF THERE IS A FIT

Choose one case type.

Map it together.

We propose a two-week mapping and feasibility phase: establish a baseline, agree the control boundaries, and select a first build. Implementation scope and budget follow the feasibility review.

Across Legal owns

Legal interpretation, risk decisions, client communications and final approval.

Silow owns

Workflow mapping, the agreed automation build, measurement and iteration.
